

# Voya Activity SaaS User Guide

---

*What each screen does, how screens are linked, and what the fields mean*

This guide explains the vendor portal in plain language. It follows the real application screens and shows how a vendor moves from onboarding to activities, rate plans, availability, bookings, payouts, and performance.

## Quick start

| Item          | Value                          |
|---------------|--------------------------------|
| Frontend      | http://localhost:3007          |
| Backend API   | http://localhost:4007/api      |
| Swagger       | http://localhost:4007/api/docs |
| Demo email    | vendor@voya.demo               |
| Demo password | Demo@123                       |

The browser application is the front door. It calls the NestJS API, and the API reads and writes PostgreSQL through Prisma. You normally work in the browser; pgAdmin is useful when you want to inspect the stored rows.

## How the screens are linked

The left menu is available after login. Each menu item changes the main screen without changing the vendor account. Several screens are linked by IDs: an Activity owns Rate Plans; a Rate Plan owns Traveller Rules, Cancellation Rules, and Availability Slots; Bookings can refer to an Activity and Rate Plan.

| Screen          | Main purpose                               | What it links to                |
|-----------------|--------------------------------------------|---------------------------------|
| Dashboard       | Summary of vendor activity                 | Bookings, Listings, Onboarding  |
| Onboarding      | Business verification and payout readiness | VendorProfile and documents     |
| Listings        | Search and open activities                 | Activity Editor and Rate Plans  |
| Activity Editor | Create/edit product information            | Media, Rate Plans, Availability |
| Availability    | Set dates, slots, capacity and promotions  | RatePlan and AvailabilitySlot   |
| Bookings        | Confirm or cancel reservations             | Activity, RatePlan and Booking  |
| Payouts         | View settlement history                    | Payout                          |
| Performance     | Review service quality                     | Dashboard and booking metrics   |

# Login and dashboard

Figure 1. Exact login screen captured from the running Chrome application.

Enter the seeded demo email and password, then select Sign in. Authentication is performed by the NestJS API and the returned JWT is stored by the browser for authenticated requests; the React app does not fake a successful login.

Figure 2. Exact dashboard screen captured from the running Chrome application. The dashboard is the starting point after a successful login.

The dashboard gives a quick operational summary. Bookings Today counts recent booking activity, Revenue MTD shows confirmed and completed revenue for the month, Pending Bookings needs vendor action, and Vendor Readiness shows how complete the account is.

Figure 4. Exact listings screen captured from the running Chrome application.

Listings is the activity catalogue. Use the search box to find an activity, use status filters to narrow the list, and click a listing card to open the Activity Editor. “Live”, “Under Review”, and “Draft” are workflow states. A listing price is taken from its first rate plan when one exists.

## Activity editor

Figure 5. Exact Activity Editor screen captured from the running Chrome application.

| Section                   | Important fields                                                         | What to enter                                           |
|---------------------------|--------------------------------------------------------------------------|---------------------------------------------------------|
| Basic Info                | Product Name, Activity Type, Activity Sub-Type, Star Rating, Description | Customer-facing product identity and explanation        |
| Category and Location     | Sub-Category, City, State, Country, Address, Latitude, Longitude         | Where the activity happens and how it is categorized    |
| Media                     | Media Type, Media URL                                                    | Image or video URL for the product catalogue            |
| Logistics                 | Things to Carry, Important Information                                   | Operational instructions shown with the product         |
| Rate Plan and Travellers  | Rate plan code, currency, price, pax limits, traveller prices            | Commercial offer that can be booked                     |
| Policies and Cancellation | Terms and cancellation slabs                                             | Customer terms and charges based on days before service |

Save Draft writes the activity to the database. Submit for Review changes a draft to Under Review. Publish Listing is available in the working demo and changes the listing to Live. Editing a live activity moves it back to review so production changes are checked.

## Rate plans and traveller pricing

A rate plan is a bookable commercial version of an activity. One activity can have many rate plans, such as Standard, Private, Premium, Adult, Child, or different vehicle options. The activity is the product; the rate plan is the price and operating rules for that product.

| Field                        | Meaning                                              |
|------------------------------|------------------------------------------------------|
| Rateplan ID / Code           | Unique code for the plan within its activity         |
| Rateplan Name                | Human-readable commercial name                       |
| Base Price                   | Default price stored as a database Decimal           |
| Unit Type                    | Whether price is per person or per unit              |
| Min Pax / Max Pax            | Allowed booking group size                           |
| Valid From / Valid To        | Date range when the plan can be used                 |
| Currency                     | Three-letter currency code used for the plan         |
| Valid Days / Blackout Dates  | Days the plan operates and dates that are excluded   |
| Duration                     | Expected activity duration in minutes                |
| Time of Day / Pickup Details | Operating time and meeting-point information         |
| Pickup / Drop-off            | Operational transport details                        |
| Inclusions / Exclusions      | What is and is not included in the price             |
| Traveller Rules              | Adult, child, senior, and other age/price rules      |
| Auto-Redeem Voucher          | Whether the voucher is marked redeemed automatically |
| Cancellation Rules           | Ordered slabs for cancellation charges               |

## Availability and promotions

Figure 6. Exact Availability screen captured from the running Chrome application. The live demo contains at least 10 selectable rate plans with inventory.

| Field              | Meaning                                     | Rule                                           |
|--------------------|---------------------------------------------|------------------------------------------------|
| Rate Plan Selector | Chooses which plan's slots are being viewed | Only rate plans with seeded inventory appear   |
| Slot Date          | Service date                                | Stored as a date without a time of day         |
| Start Time         | Daily operating slot time                   | Combined with date and plan to identify a slot |
| Available          | Remaining places for that slot              | Must not be greater than capacity              |
| Capacity           | Maximum places for that slot                | Used to protect inventory limits               |
| Price Override     | Optional slot-specific price                | Otherwise the rate plan base price is used     |

|           |                                     |                                           |
|-----------|-------------------------------------|-------------------------------------------|
| Closed    | Temporarily closes a slot           | Closed slots cannot be sold               |
| Promotion | Time-boxed discount for an activity | Has start, end, discount, and booking cap |

Save Inventory sends the visible slots to the API. The backend uses optimistic version checks so a stale browser cannot silently overwrite another update.

Vendor account  
85M-14P518  
Manage

Figure 7. Exact Bookings screen captured from the running Chrome application.

Use All, Needs Action, Confirmed, and Cancelled filters to manage incoming reservations. A pending booking can be confirmed or cancelled. Confirmed and completed bookings expose Voucher. The API protects valid state transitions and keeps booking records isolated to the vendor tenant.

# Payouts and performance

Figure 8. Exact Payouts screen captured from the running Chrome application.

Figure 9. Exact Performance screen captured from the running Chrome application.

Payouts is read-only settlement history in this demo. Performance summarizes response time, cancellation rate, customer rating, readiness, and listing quality so the vendor knows what needs attention.

## Database relationship in simple terms

The important chain is: Tenant → Vendor User and Vendor Profile. Tenant → Activities. Activity → Media, Rate Plans, Promotions, and Bookings. Rate Plan → Traveller Rules, Cancellation Rules, and Availability Slots. Booking can point back to the Activity and the selected Rate Plan.

|                          |                                     |
|--------------------------|-------------------------------------|
| When you use this screen | The main database row being changed |
|--------------------------|-------------------------------------|

|                            |                                                  |
|----------------------------|--------------------------------------------------|
| Save Business Details      | VendorProfile                                    |
| Save Draft / Edit Activity | Activity                                         |
| Add Media                  | ActivityMedia                                    |
| Create Rate Plan           | RatePlan plus TravellerRule and CancellationRule |
| Save Inventory             | AvailabilitySlot                                 |
| Schedule Promotion         | Promotion                                        |
| Confirm or Cancel Booking  | Booking                                          |

## Troubleshooting

If the browser is blank, confirm the backend is running on port 4007 and the frontend on port 3007. If lists are empty, confirm the browser is logged in as `vendor@voya.demo` and that PostgreSQL database `activity_saas` is running. In pgAdmin, browse rows by expanding `activity_saas` → Schemas → public → Tables, then right-click a table and choose View/Edit Data → All Rows.
